

## Canada finalizes pavilion design

2009.03.12.

The design for the Canada Pavilion at Expo 2010 is now finalized. The design approach, which has an open air public space as its centre piece, was first unveiled in January 2008. Over the past year, the design, created by Cirque du Soleil, has evolved through adjustments and refinements.

SNC-Lavalin Inc., one of Canada's best-known engineering and construction companies, has been contracted to build the Canada Pavilion.

Canada formally accepted its 6000m<sup>2</sup> pavilion lot in the Americas section of [Zone C](#) of the Expo site in early February 2009.

SNC-Lavalin Inc. has now started work on preparing the site and building the Canada Pavilion foundation, making Canada among the first countries to start construction at Expo 2010.
